

J800 DETECTAPEN®

THE ORIGINAL RETRACTABLE DETECTABLE PEN

Product Description:

Detectapens are designed for food processing, made from detectable polypropylene co-polymer for metal and X-ray detection. Featuring silver ion antibacterial technology and high-quality ink cartridges, they're EU and FDA compliant, ergonomic, and drop-resistant. It's the highest selling detectable pen style in the world today.

Advantages

- Meets BRC Requirements for Metal Detectable Pens
- Fully Detectable Pen by Metal Detection Systems and X-Ray inspection systems
- Strong, durable, shatter resistant, and chemically resistant material
- Includes silver-ion anti-microbial additive that is effective against E-Colu, MRSA, and Salmonella
- Meets EU and FDA Requirements for indirect food contact
- Unique three-piece design made of fully detectable pieces and no small parts
- 30,000 Feet Write out length
- Functions in ambient temperatures from 41°F to 86°F

Housing Material

Detectable Polypropylene Co-Polymer

Cartridge Material

Stainless Steel

Pack Quantity

25 pens

Pack Weight

1 lb.

Body Styles

With a clip & with a lanyard loop

Body Colors Available

■ Black	■ White
■ Red	■ Orange
■ Yellow	■ Green
■ Blue	■ Purple
■ Pink	

Ink Colors Available

■ Blue	■ Black
■ Red	■ Green

Ink Specs

- ✓ Temperature Range 41°F - 86°F
- ✓ Unpressurised ink
- ✓ MITI Listed (Japan)
- ✓ ISO 12575 - 2 DOC G2
- ✓ ISO 12575 - 2 DOC H
- ✓ ISO 12575 - 2 G2
- ✓ ISO 12575 - 2 DOC A2
- ✓ ISO 12575 - 1 A M
- ✓ TSCA Listed (USA)
- ✓ ISO 12757 - 1
- ✓ ISO 12757 - 2

Item Number

D1008 (with a clip)
D1009 (with a lanyard loop)

TESTING RESULTS

FDA Food Contact Status

Our Detectable Polypropylene Co-Polymer complies with FDA regulations for food contact applications as outlined in 21 CFR 177.1520 (a)(3)(i), (b), and (c)(3.1a). It is approved for use with all food types under conditions of use C through H (21 CFR 176.170(c), Table 2), excluding cooking applications.

Additionally, all mineral additives and pigments used are either GRAS (Generally Recognized As Safe) or FDA-approved under specific regulations.

EU Food Contact Status

The Detectable Polypropylene Co-Polymer in various colours is manufactured in line with the relevant requirements of 2023/2006/EC on good manufacturing practice (GMP) for materials and articles intended to come into contact with food.

The raw materials used in the manufacturing process of the above mentioned materials (XDETECT 2.0 in various colours) can be considered suitable for food contact applications in terms of compliance with European regulations. The raw materials used meet the relevant requirements of EU Framework Regulation 1935/2004 on materials and articles intended to come into contact with food.

X-Ray Visibility

X-ray visibility depends on material density, so our Detectable Polypropylene includes a food-safe, high-density additive for improved detection. Testing shows consistent positive readings for whole pens and fragments as small as 5mm, though detection may be reduced when fragments are buried in denser products. Performance varies by product type and density, so we recommend professional testing and potential recalibration of x-ray inspection systems to ensure reliable detection.

Metal Detectability

Our Detectable Polypropylene Co-Polymer is an electromagnetically detectable and x-ray visible plastic, with a stainless steel ink cartridge. Metal detectability varies based on factors such as calibration levels, product type, aperture dimensions, and orientation, with the “orientation effect” influencing detection sensitivity. Our testing used a worst-case scenario approach, equating pen components to ferrous ball test piece equivalents for calibration ease. As metal detector sensitivity varies, BSC recommends professional testing and potential recalibration of detection systems to ensure reliable performance. UKAS-accredited test pieces are available for purchase.

Detectapen Antibacterial Technology

Detectapen products feature built-in silver ion antimicrobial technology from SteriTouch, providing continuous protection against bacteria such as MRSA, E. Coli, and Salmonella, reducing the risk of cross-contamination. The antibacterial properties are permanently embedded in the material and will not wear off over time.

Laboratory-tested, this technology is proven effective against harmful bacteria and mold, including Bacillus Cereus, Campylobacter, Streptococcus, and more.

The antibacterial additive complies with Regulation 1935/2004/EC and Regulation 10/2011/EC, ensuring safety for food contact materials. All components meet EU-approved substance regulations, and no restricted dual-use additives are intentionally used.
